QUATURIS S CORNER CABINET SYSTEM

The elegant movement solution
for standard base cabinets.
Ergonomic. Convenient. Functional.

Quaturis S: Each corner is a curve.

Making optimum use of storage space is one of the greatest challenges in modern furniture design. Particularly so when it comes to perfect organisation in the kitchen. And what nobody even suspected: corner areas hold the greatest potential.

With Quaturis S, GRASS now offers an easy-to-use movement solution for standard base corner cabinets for the first time.

Intelligent movement solutions must be simple and fulfil the most complex requirements.

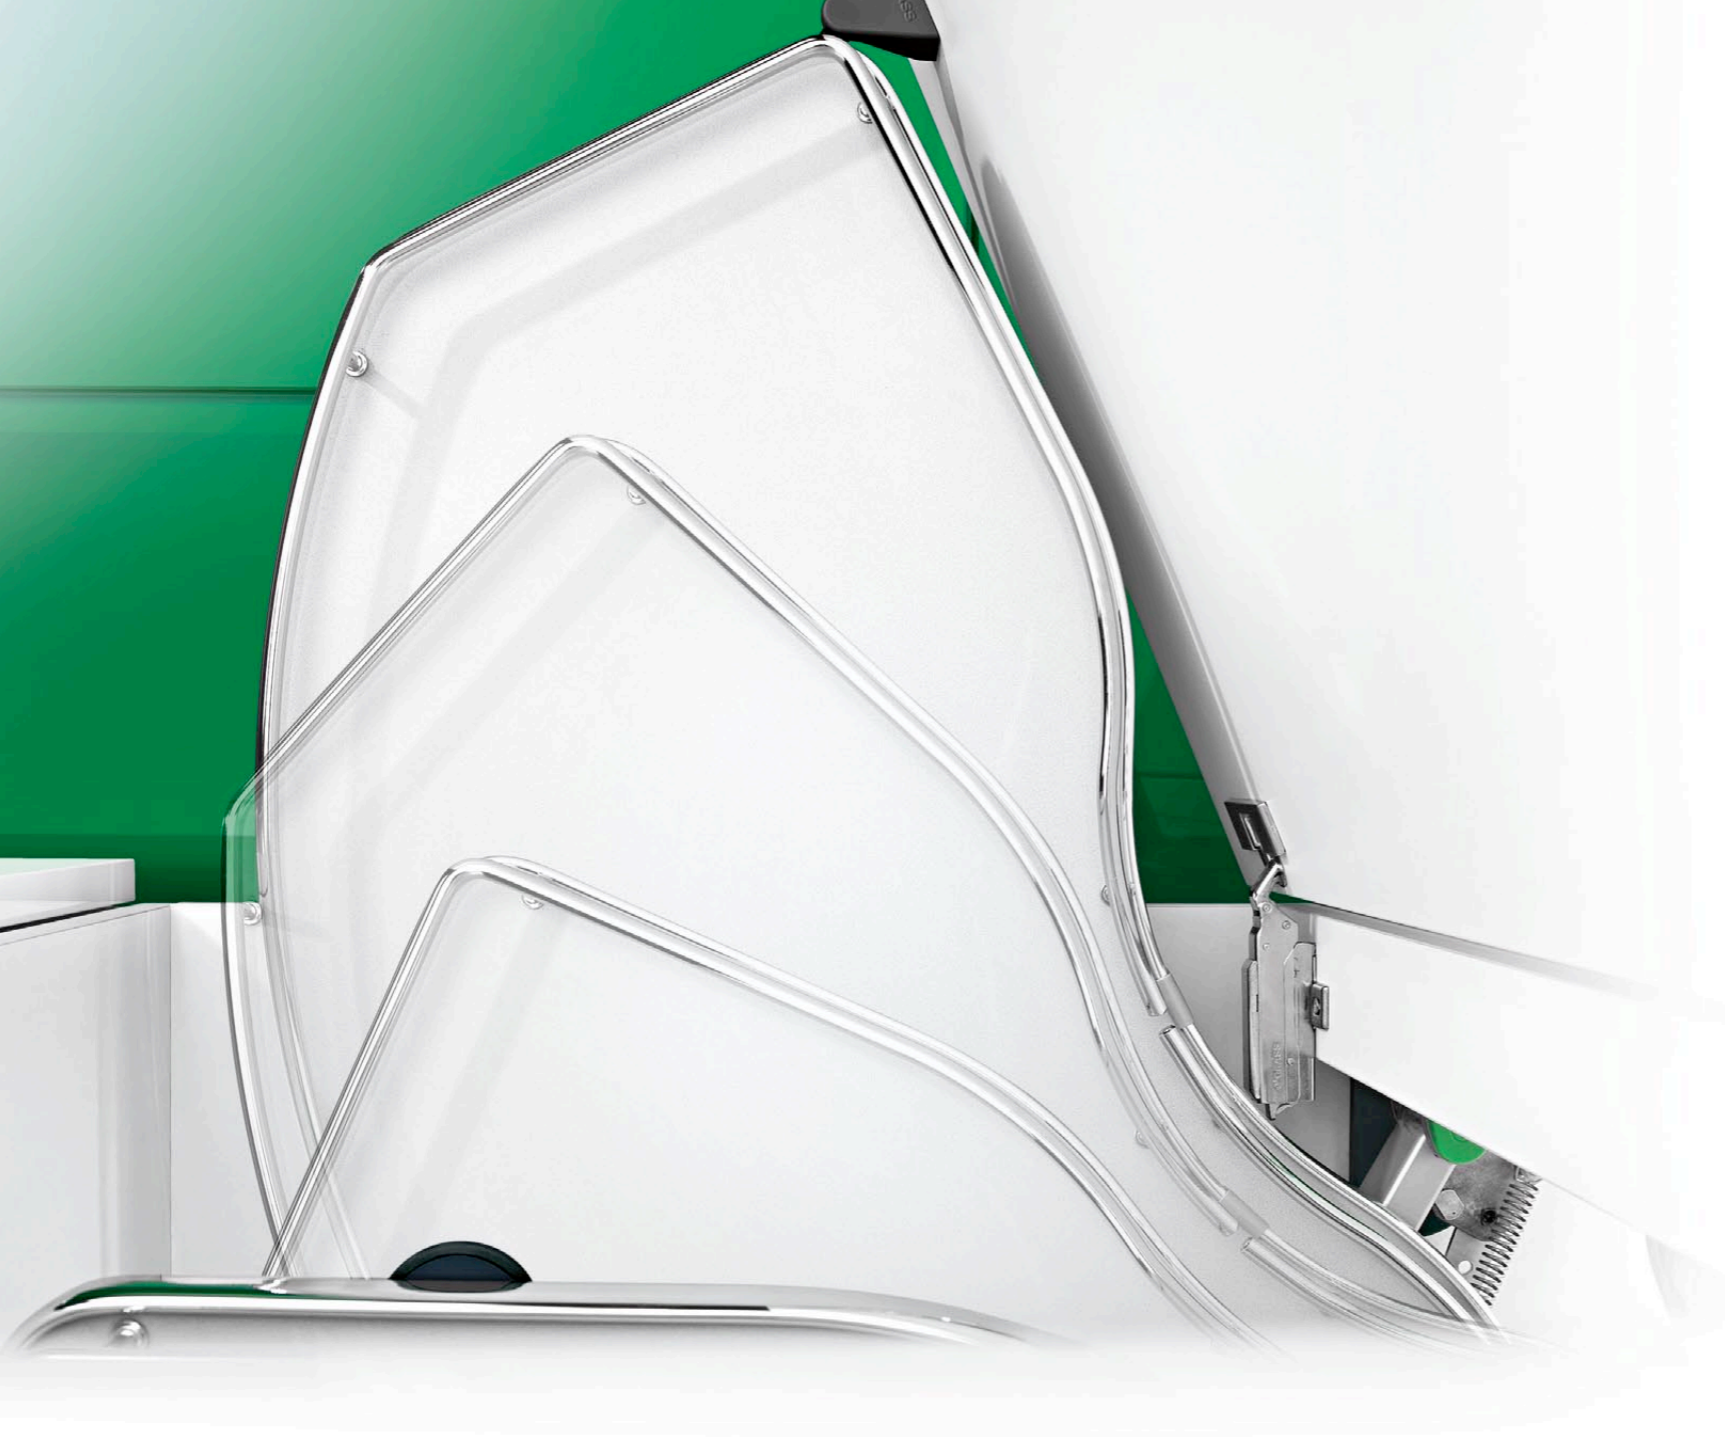

Our motivation is to equip modern furniture with convenient movement functions so that using them is fun.

With Quaturis S, GRASS developers have achieved an innovation that does just that. Together with intelligent technology, the new corner cabinet system offers optimum use of space, maximum ease of use, timeless design and an extremely harmonious movement profile. Try it for yourself.

Out into the fresh air
to enjoy the view.

**Here, everyone wants to be in the front row.
That's just what all your stored items can do.**

Because Quaturis S shelves enable virtually all the contents of the cabinet to be swung completely out from the interior. And even better, the ergonomically shaped shelves don't only look good, their surface is provided with an anti-slip coating. So your items are kept safely in position even during movement.

It all comes down to cornering technology.

What racing drivers have known for a long time is becoming ever more important for kitchen planning. The cornering technology must be right. Because in the kitchen, no space should be wasted.

To make optimum use of storage space, there is a need for intelligent movement concepts which swing the contents of the cabinet out of its interior. When developing the Quaturis S, we therefore paid particular attention to ensuring an optimised movement curve in terms of ergonomics, aesthetics and function. A requirement that the new corner cabinet system more than fulfills, because the unique cornering technology makes combination with adjoining cabinets entirely straightforward.

QUATURIS S CORNER CABINET SYSTEM

The whole is more
than the sum of the parts.

Every last detail, whether visible or hidden, fulfils a particular purpose. All the way through from the guide disc that gently cushions every movement, to the robust suspension system that easily supports high loads, and also the Soft-close damping system. But it doesn't stop there. The true quality is in the detail, so they say. And Quaturis S is a perfect example of just that.

**Form and function are harmoniously combined,
ensuring that tomorrow's requirements are met today.**

An elegant movement path for maximum ease of use.

Thanks to a special swivel mechanism, the ergonomically shaped shelves of the Quaturis S offer optimum access to the entire storage area. The fact that the lower level shelf moves automatically when the door opens is particularly practical. This ensures that the contents are immediately brought into view. The shelf can now be easily loaded and unloaded from above. In addition, the closing mechanism is exceptionally easy to use because all the shelves retract back into the cabinet at a touch. Naturally, gently damped by Soft-close.

These special characteristics make Quaturis S a highly convenient functional system for the modern kitchen.

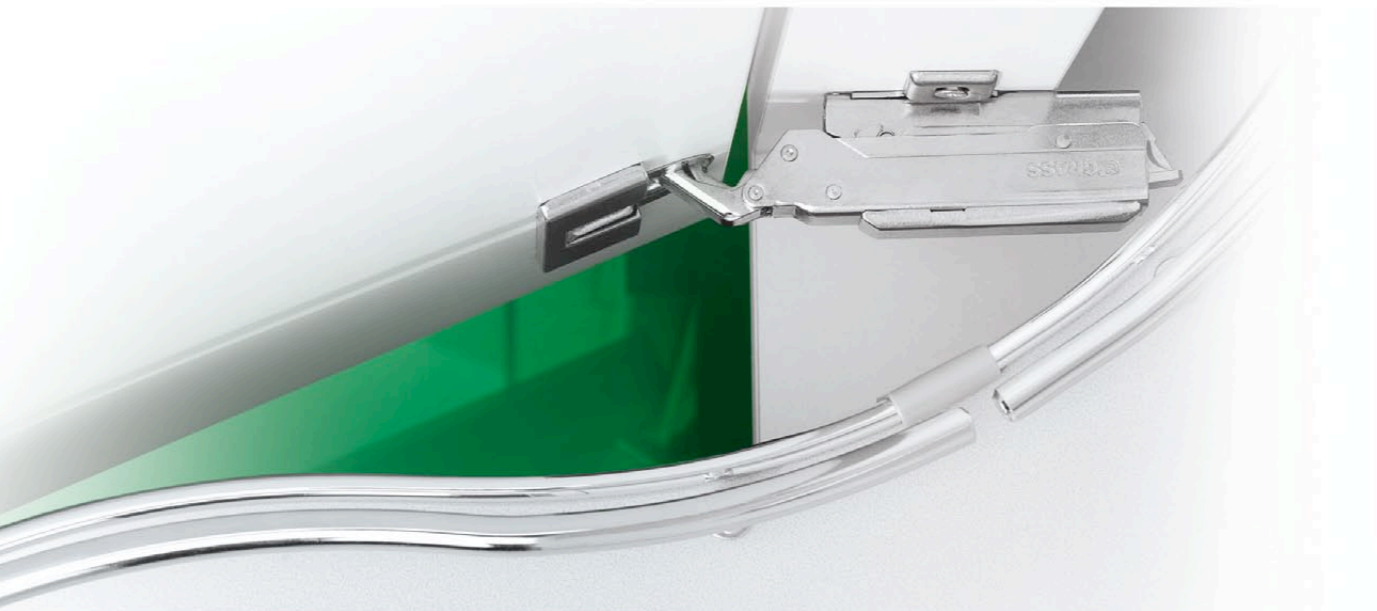

Technology
is perfect, when you
don't notice it.

Each movement system is only as good as the background technology. And with Quaturis S, the inner values are particularly impressive.

On the one hand, a corner cabinet system should offer as much storage space and load capacity as possible; on the other hand, it should be extremely easy to use and have excellent functional properties. That these requirements can be combined, is evidenced by Quaturis S. At the heart of the new cabinet system is a central telescopic tube which acts as pivot point for the freely swivelling shelves. This makes shelf installation quick and easy: the shelves can be clipped in a single action and are continuously height-adjustable.

Maximum accommodation on all levels.

With the correct cabinet system, a blind corner becomes an ideal storage area.

Previously, you had to get down on your knees to reach the contents of corner base cabinets. With our Quaturis S, that has all changed. The new corner cabinet system always swivels the stored items into the ergonomically optimum position so pots and pans are always accessible at the front of the base unit. This is ease of use on a new level.

Open. Swivel. Access.
Storage couldn't
be any easier.

The features of the Quaturis S corner cabinet system at a glance:

- **Premium quality:** Quality movement system for standard corner cabinets; widths 900 mm, 1000 mm and 1200 mm.
- **Functional:** Shelves swing almost completely out of the corner cabinet. All levels can be moved independently of each other.
- **Easy to use:** The swung-out shelves offer optimum access to the whole storage surface.
- **Loadable:** Each shelf easily supports 20 kg.
- **Flexible:** Two or three levels possible. All shelf heights are continuously adjustable.
- **Upgradeable:** Addition of a third shelf is still possible after the cabinet has been assembled.
- **Uncomplicated:** Tool-free, quick and reliable shelf installation.
- **Convenient:** Quaturis S can be equipped with the self-retracting feature and the track-proven Soft-close damping system.
